

Introducing the **Stealth M-Series™**

A Revolution in Encrypted Secure Storage

MXI Security's Stealth M-Series is a revolution in portable secure storage and digital identity. Affordable, fast, and secure, these premium devices are the ultimate safeguard for your most critical assets.

Powered by the Bluefly Processor, all products in the Stealth M-Series feature on-board hardware AES 256-bit encryption to automatically protect all its content, from data, to applications, to digital identities. The Bluefly Processor provides unmatched hardware protection against malware in any environment, foreign or familiar.

Bluefly's SafeShare™ technology, unique in the industry, permits Stealth M-Series users to collaborate using on-device data without compromising its safety.

What's more, all Stealth M-Series devices are protected by an innovative tamper-evident enclosure that acts as an integral case, making the device both waterproof and dustproof. Fully portable across all major computing platforms, and available in managed and unmanaged options, the Stealth M-Series redefines portable security.
