

Security in a Flash

Stealth Mini™ is a Managed Portable Security Device ideally suited for organizations looking for highly secure storage solutions that are truly portable and easy to manage. Stealth Mini™ is available in a FIPS 140-2 Level 2 validated version.

Featuring built-in hardware-based AES 256-bit encryption and strong password authentication, all data stored on the Stealth Mini™ is inaccessible without permission.

Now IT administrators can easily provision, configure, and support thousands of ultra reliable Stealth Minis by managing them with ACCESS Enterprise™, the simple yet powerful Device Lifecycle Management Solution from MXI Security.

Requiring no client-side software or driver installation, the zero footprint Stealth Mini™ offers an intuitive and productive experience for end-users.

Available in 1GB and 2GB capacities, Stealth Mini™ is the perfect choice for security in a flash!
