

## **Intel® PRO/10/100/1000 Software Release 3.1 Gold+CAT Release Features**

**Gold+CAT Release – Build V3.1C0000 TIC = 72312 Build Date 10/06/03**

- Bay City 3.1 is a point release created to address the following critical issues:
  - SCR 31150: When QoS Packet Tagging is disabled in the advanced properties, the software will not priority-tag packets. The driver was tagging packets whether this option was enabled or disabled.). This issue affected the Windows XP 32/64bit and Windows Server 2003 32/64bit operating systems.
  - SCR 31216: The network is not available at registration time, preventing users from registering via a broadband connection. This was corrected by disabling the LogLinkStateEvent parameter in the 10/100 INF file.
