

PROTECT LIFE, SUPPORT OFFICERS, IMPROVE OPERATING EFFICIENCIES

In-vehicle video surveillance is increasingly being incorporated into the security solutions of transport operators in the government, commercial, and private sectors. The need to increase situational awareness, reduce theft, prevent violence and fraud, as well as, improve operating efficiencies are motivating fleet managers and transportation authorities to consider mobile video surveillance systems as a critical part of their business management and security measures. Furthermore, the increasing use and deployment of wireless infrastructure are making it easier to integrate real-time video streaming with mobile video surveillance equipment.

IvedaOnBoard is our solution to this need. IvedaOnBoard utilizes any in-car camera available in the market today with our Streaming Video Converter (SVC) and managed video hosting service (IvedaEnterprise). IvedaOnBoard allows our customers real-time situational assessment of field activities and secured storage of video footage at our data centers. This untethered surveillance solution utilizes Wide Area Network (WAN) data services such as cellular, mesh wireless, and WiFi.

Centralized video management of an entire mobile fleet includes high quality real-time streaming video and instant review of footage remotely, thus no need to have a recording device onboard.

IvedaOnBoard is currently being used by a government agency in Mexico in their fleet of police cars and armored vehicles.

APPLICATIONS

Law Enforcement

*Protect Life, Support Officers,
Reduce Response Time*

When life is on the line there's no time to call in for backup or rewind the turn of events. So, why risk a delayed response when you can have someone watch your back? IvedaOnBoard is just like having a virtual partner. Command center and/or other police officers can log in to the camera in the vehicle to assess the situation and send immediate help to the officer in distress.

School Bus

Stop Bullying, Protect Students, Stop Graffiti, Prevent Liability

With bullying on the rise, parents are more concerned than ever when it comes to protecting their children. A school bus is an ideal place for bullies to terrorize vulnerable students because there is no place for the victims to run and there are no adults present, except for the pre-occupied bus driver.

IvedaOnBoard with our real-time surveillance service can help catch bullies in the act and prevent serious harm to the victims. With a camera in the bus, we can watch in real time and immediately call either the bus driver or the police to report bullying in progress.

Commercial Transportation

Monitor Assets and Improve Operations, Provide Driver Safety, Reduce Cargo Theft and Damage

With approximately 2.3 million large trucks operating and annual cargo theft at \$8-12 Billion in the U.S. alone, remote video monitoring of commercial transportation vehicles offers tremendous value. Active video monitoring of transportation assets can help provide cargo management and supply chain integrity from origin to destination. With IvedaOnBoard, fleet managers and transportation companies can mitigate risks associated with cargo theft, spoilage, and damage.

Emergency Response Vehicles

Improve Safety, Save Lives, Get Critical Information as Events Unfold

In times of crisis and emergency response, it is critical to mobilize and stay connected. IvedaOnBoard offers simple live remote user access to extend capabilities in the field where you need them most. Real-time situational awareness is a tremendous benefit for first responders that can serve as a force multiplier saving lives and providing mission-critical information to multiple stakeholders simultaneously.
