

Know where in the world your cameras are and get live video...

Any camera make, anywhere in the world, certain video management software (VMS). One centralized camera management, one username/password

IvedaPinpoint is the newest cloud-video hosting innovation from Iveda Solutions, the pioneer in cloud video surveillance. If you are already a hosting or real-time video surveillance customer and you just want another simple way to access your cameras on the fly, using a mobile device or a computer, add IvedaPinpoint to your subscription.

If we are not hosting your cameras, we can bring specific Internet-accessible cameras and video management systems (VMS) onto our IvedaPinpoint platform.

IvedaPinpoint is a global positioning/mapping and video management system consolidation. Through a single login and password, IvedaPinpoint users are able to concurrently pull live video feeds from multiple VMS platforms. IvedaPinpoint customers can add an unlimited number of VMS camera accounts to access all their video feeds from a single centralized video management platform.

IvedaPinpoint offers a visual map interface with markers on the map reflecting camera locations. Zoom out on a map for wider views of more geography or zoom-in to any area where you have multiple camera locations to pinpoint the specific cameras you are looking for. Click on a marker and immediately start viewing live video from that specific camera.

IvedaPinpoint provides first responders, tactical units, executives, business managers, vacation home owners, and residents with live visual verification of daily events and situational awareness of geographically separate operations.

Applications

- Law Enforcement
- HOA
- Transportation
- Logistics
- Executive Protection
- Security Guard Services

Features & Benefits:

- See actual camera locations on a map
- Access Live Video From Any Web Browser, Anywhere, Anytime
